product quality & environment

In today's fast moving environment consumer's tastes and trends are constantly changing and here at Whiteriver we endeavour to keep our ranges in tune with demand. We are also fully committed to following all Government and EU policy on the handling and sourcing of timber products. In Europe through the EU timber regulations we have very strong legislation that puts in place detailed check lists and audits that ensure all timber products supplied come from sustainable sources. Our product ranges are primarily based on wood species that have proven sustainable reserves which ensures you can have peace of mind when selecting one of our products.

Our company has both FSC® and PEFC Chain of Custody certification. The Forest Stewardship Council (FSC®) aims to promote environmentally appropriate, socially beneficial and environmentally viable management of the world's forests. Read more about FSC – www.fsc.org. The Programme for the Endorsement of Forest Certification (PEFC) is an international non-profit, non-governmental organisation dedicated to promoting Sustainable Forest Management (SFM) through independent third-party certification. Read more about PEFC – www.pefc.org.

BARISTA

BY WHITERIVER

Barista is our newest collection of European manufactured engineered flooring. Warm contemporary tones are brought together in a palette of colours to stir the senses and awaken your imagination. We took the world's love affair with coffee as inspiration for the collection to bring you a selection of eight distinctive shades, from frothy light "Latte" and "Mocha" to richer "Napoletana" and "Con Panna" there's a shade to suit all tastes.

barista

BY WHITERIVER

Like choosing coffee, sometimes a “regular” is just not enough to satisfy your desire, that’s why we have added a selection of our favourite colours in a wider 207mm plank to the collection. These, as well as our standard 180mm wide boards are 2200mm long to give that sought after long board look and make a true statement in any setting.
Our Barista Plank range is manufactured to the highest specification, FSC certified and perfectly suited for use with underfloor heating.

barista

BY WHITERIVER

The Herringbone design has been with us for centuries and remains a timeless classic when it comes to floor design. Today, more so than ever, the architectural design and craftsmanship that goes into each piece is in high demand for both domestic and commercial projects. Our Barista Herringbone is the perfect complement to our Barista Plank range and brings a distinctive touch of modern day sophistication to any floor. Matching planks with the same thickness allow the two formats to blend together and flow effortlessly from one room to the next.

All Barista Herringbone floors are manufactured in Europe, protected with a high quality durable matt lacquer and feature a micro bevel on each side.

130

Barista Herringbone has a drop down click system and must also be glued down.

monolam

BY WHITERIVER

Available in a variety of widths between 120mm and 190mm, the Whiteriver Monolam Collection of engineered flooring offers a fantastic selection of versatile styles to suit the most contemporary or traditional home. The 18mm board thickness features a 4mm top layer of finely selected real hardwood, finished to the highest manufacturing standards with either a multi-coat lacquer or UV oil finish. Whether you enjoy the classic timelessness of European Oak, the richness of American Walnut or the warmth of Acacia Walnut, there is something in the Monolam Collection to suit every taste.

VARIOUS BOARD SIZES

heritage

BY WHITERIVER

Our premium range of engineered floors, with wide plank 189mm/190mm boards, The Heritage range is a stunning collection of floors that will enhance any room with its bold dimensions. The boards are a *proud 1900mm/2200mm in length for that sought-after long board look. Boasting 18mm or 20mm thick boards with 4mm or 6mm real wood layers, they are the height of excellence in construction and design. Whether your tastes are for light floors, darker woods, lacquered or matt finishes, the Heritage range has been extended to bigger than ever before to maximise your options.

**Dakota Walnut planks are 1860mm in length*.

chevron

BY WHITERIVER

The current trend for something a little different from traditional plank boards crosses over two popular formats - Herringbone and Chevron. Here, we have taken the best of our Herringbone Collection and created a select Chevron range of warm and inviting tones. The distinctive arrow pattern can be used to draw the eye to the most prominent focal point in your room.

Note: *Panels are supplied in lefts and rights.*

versailles

BY WHITERIVER

Originally commissioned by Louis XVI for the famous Palace of Versailles, these bespoke intricate floor panels are steeped in history. Individual pieces of wood are hand crafted to an exacting standard and pressed onto a birch plywood base to create each panel. Indulge your very own palace with these exquisite examples of craftsmanship - choose between matt varnished and smoked & matt varnished, or create a unique look using our unfinished panels with a colour to complement your decor.

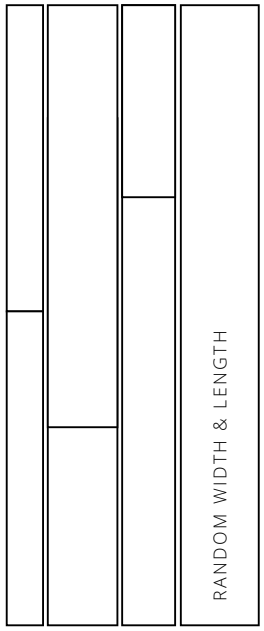
collection

HISTORIC

BY WHITERIVER

Timber has been harvested as an essential construction material for centuries. Trees grown in the Baltics, North America and China were shipped around the world to meet the growing demand of industrialisation. We have brought together a collection of salvaged woods dating back decades to create our bespoke Historic Collection. The passion and workmanship that went into the building of boats and farm buildings in the 18th & 19th centuries has been rekindled by artisan craftsmen to bring this unique part of history back to life. The imperfections of each salvaged piece enhance the overall beauty of the finished product, each blemish having its own secret past. All pieces of reclaimed wood are delicately shaped into flooring and wall panelling that is easy to install in today's modern world.



historic *reclaimed plank*

BY WHITERIVER

The bespoke nature of crafting each plank results in an individuality that cannot be replicated creating varying widths and lengths for a truly authentic look. Creating planks begins with cutting a *4mm thick veneer from reclaimed timbers and pressing them onto an FSC - certified plywood base to give an overall thickness of 15mm. A selection of our most popular finishes are complemented with matching herringbone / chevron designs - see following pages for details.

**New Orleans plank has a 6mm veneer on a FSC - certified plywood base with an overall thickness 18mm.*

Note: *Plank widths vary from 70mm - 230mm / Lengths vary from 400mm - 2200mm*

plank

historic *reclaimed herringbone & chevron*

BY WHITERIVER

The contrasting characteristics of salvaged wood and precision cutting are fused to create stunning herringbone and chevron flooring. The creative process begins with selecting the finest materials from around the world which are shaped into extraordinary pieces of modern-day flooring by master craftsmen. Traditional methods are used throughout the process which begins with pressing 4mm veneers of history onto an FSC - certified plywood base for stability - each one cut meticulously for an exacting fit.

A selection of our Herringbone and Chevron collection is complemented with a matching plank format which is perfect for defining different spaces without compromising the overall desired effect.

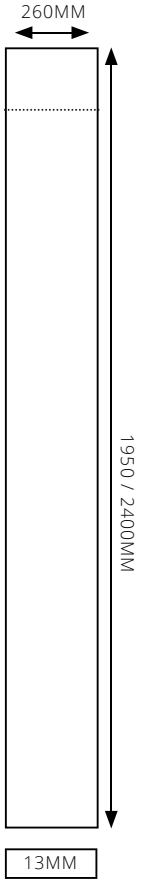
RENAISSANCE

Renaissance, literally meaning “Rebirth“ in French, was a period in history between the 14th and 17th centuries which brought a new perspective of art, architecture, politics, science and literature across most of Europe.

Renaissance style focuses on symmetry, proportion and geometry and introduced standards to construction materials which have stood the test of time. Influenced by the pioneering visionaries of the period we have brought together a premium range of wide plank floors manufactured in Europe using the finest quality European Oak.



renaissance 13mm

BY WHITERIVER

The Renaissance Collection will fit into both modern and classic interiors effortlessly. Manufactured in Europe with a 9mm birch plywood and 4mm top layer construction for optimum stability. Featuring dimensions of 260mm wide and 1950/2400mm long, these boards are exceptional and expansive in their size and character.

renaissance XL

BY WHITERIVER

Renaissance XL represents customisation, quality, exclusiveness, nature and sustainability, which are reflected in all of our designs. During the production process the floor elements are manufactured by hand, this way each plank has its own unique and exclusive appearance. XL floors are characterised by their unique surface. The exclusive finishing stands out because of the particularly varying heights, better known as Original Surface. XL can also be provided in a sanded variant, for an even surface - the Sanded Surface. These extraordinary floors are produced in different lengths up to as much as 4 metres long and almost 50 cm wide.

Note: *Plank widths vary from 280mm - 480mm*
Plank lengths vary from 2000mm - 4000mm / Plank thickness varies between products.
See individual product details on page 120.

architects & *designers*

architects & *designers*

We have a long tradition of working with Architects & Designers on both commercial and residential developments. Along with offering our product range which is displayed on our site, we also offer a bespoke product design service for larger projects, we have expertise dealing in both new design and protected restoration. Our company has worked on many leading projects and have expertise in the following areas.

- Hotels
- Pubs & Restaurants
- Retail
- Residential
- Health care
- College/Universities
- Student accommodation
- Museums

Recent projects of note include Lansdowne Place, Adare Manor Hotel and Golf Resort, Becton Dickinson Research Centre, Mount Juliet Estate, Hanover Quay, Tayto Park, Cliff House Hotel, Kerry Group H.Q., Carechoice Nursing Home, UCC Student Campus.

Our company is both FSC & PEFC certified and we also follow and comply with EU policy on the importation and sale of wood products. If you require any further information for product specification, or simply want to discuss our product offering we are more than happy to help you. We also have a full product showroom in Dunleer, Co. Louth, which is available by appointment. Please do not hesitate to contact us to discuss any requirements you may have. Tel: 041 686100 or sales@wrg.ie

Underlays & Profiles

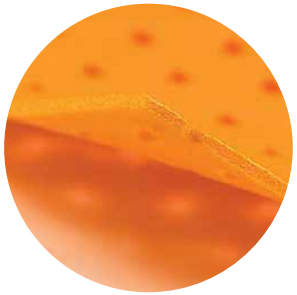
Underlay is the foundation to all professional floor installations therefore it is essential that the correct product is specified to suit conditions and customer expectations of performance. We recommend using a good quality underlay for all hard subfloors, whether they are made of cement, wood substrate, ceramic or synthetic. You consequently increase the resilience of the floor, absorb indoor and footfall sound and level minor irregularities in the subfloor. We recommend that you use polythene over concrete subfloors in addition to underlay.

3MM PE FOAM

F1010002/ F1010001
Coverage Per Roll/Pack: 15/25m2
Roll Size: 3mm x 1m x 15/25m
TOG Rating: 0.81
Impact Sound Reduction: 16db
Underfloor Heating: Not Suitable
Compressive Strength: Poor
Heat Transfer Resistance: 0.081 k/w m²

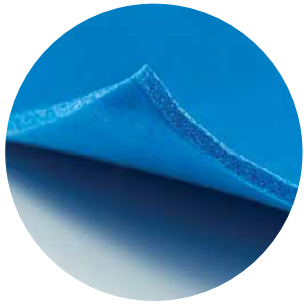
2MM CORK

F1010004
Coverage Per Roll/Pack: 20m2
Roll Size: 2mm x 1m x 20m
TOG Rating: 0.41
Impact Sound Reduction: 17db
Underfloor Heating: Yes
Compressive Strength: Good
Heat Transfer Resistance: 0.041 k/w m2



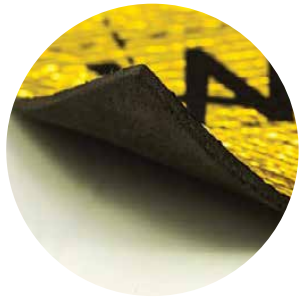
2MM HEAT MASTER PERFORATION

F1010014
Coverage Per Roll/Pack: 10m2
Roll Size: 2mm x 1m x 10m
TOG Rating: 0.35
Impact Sound Reduction: 20db
Underfloor Heating: Yes
Compressive Strength: Excellent
Heat Transfer Resistance: 0.035 k/w m2



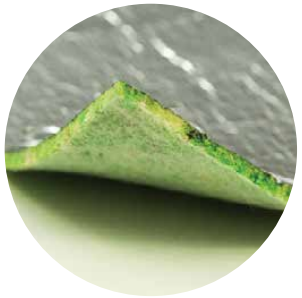
3MM ACOUSTIC BLUE

F1010007
Coverage Per Roll/Pack: 10m2
Roll Size: 3mm x 1m x 10m
TOG Rating: 0.88
Impact Sound Reduction: 22dB
Underfloor Heating: Yes (≤ 8mm Laminate)
Compressive Strength: Very Good
Heat Transfer Resistance: 0.088 k/w m2



3MM ULTRASTRONG

F1010015
Coverage Per Roll/Pack: 10m2
Roll Size: 3mm x 1m x 10m
TOG Rating: 0.60
Impact Sound Reduction: 22db
Underfloor Heating: Yes (≤ 8mm Laminate)
Compressive Strength: Excellent
Heat Transfer Resistance: 0.060 k/w m2

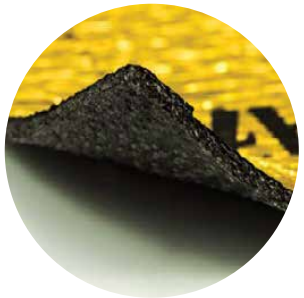


3MM SOUNDMASTER

F1010012
Coverage Per Roll/Pack: 10m2
Roll Size: 3mm x 1m x 10m
TOG Rating: 0.67
Impact Sound Reduction: 20db
Underfloor Heating: Yes (≤ 8mm Laminate)
Compressive Strength: Good
Heat Transfer Resistance: 0.067 k/w m2

3MM SILENT PLUS

F1010011
Coverage Per Roll/Pack: 10m2
Roll Size: 3mm x 1m x 10m
TOG Rating: 1.20
Impact Sound Reduction: 23db
Underfloor Heating: Not Suitable
Compressive Strength: Very Good
Heat Transfer Resistance: 0.120 k/w m2



4MM GOLD PLUS EXTRA

F1010013
Coverage Per Roll/Pack: 15m2
Roll Size: 4mm x 1m x 15m
TOG Rating: 0.90
Impact Sound Reduction: 20db
Underfloor Heating: Not Suitable
Compressive Strength: Good
Heat Transfer Resistance: 0.090 k/w m2

GRIP TIGHT 50 PRO PLUS

Flexible elastic glue
One component ready to use
Trowels easily with greater spread ability
Solvent free
Superior water vapour protection
Can be wet Laid
Working time approx. 45 mins @ 18-20°C
Suitable for under floor heating
Designed for use with Seal Tight 100

SEAL TIGHT 100

One component moisture system
Solvent free, water free & icocyanates free
Suitable for up to 6% Moisture Reading Tramex Moisture Meter
Moisture Content / Excellent bond strength for difficult floors
Superior water vapour protection
Avoids blackening of hands
No flash time required, Easy clean Up
Little bubble formation
Designed for use with Grip Tight Pro Plus
Installation must be within 24 hours of application
Note: Not suitable for Liquid/Anhydrite Screeds

Grading Guidelines

Truth of the Grain.

Trees are as individualistic as people and therefore no two are the same. It is this characteristic that makes timber floors an attractive choice and interesting feature in any setting. Grading guidelines will vary between manufacturers as well as between different species and we feel it is important to outline some of the typical variances to be found within our ranges.

We have put together the following examples of Oak grading as a guide to highlight some of the characteristics you can expect to see across different floors. It is important to note that these images are typical characteristics and will vary within their own grades as choosing veneers is done by visual inspection and is not an exact science.
There will always be a level of inconsistency in grading across any given area therefore it is important that your installer inspects each board prior to fitting, ensuring that any falling outside the grading limitations are removed within standard cutting allowances.

We cannot guarantee showroom samples and images within our brochures or website will be an exact match – selection prior to installation is the sole responsibility of the installer and end user.

PLANK PRODUCTS

Select / Prime

As the name suggests, this high grade will have little or no knots – any knots contained in the finished product will be minimal in size. Sapwood imperfections and fillers are kept to a minimum and colour matched to blend with the grain of the wood. Overall colour variation is consistent.

Nature

Nature grading contains some knots, but less than Universal grade, some sapwood and some colour variation. Knot sizes are restricted so it tends to have an overall calmer appearance than Universal grading. Knots are filled to match the natural timber however may vary between boards and batches.

Sapwood

Sapwood is the outer part of a tree's stem or branch which allows essential water and sap to flow as it continues to grow. In most species it has a lighter appearance to the rest of the tree as it naturally contains a higher level of moisture during growth. The level of sapwood in our flooring ranges is controlled within our grading guidelines and also depends on the surface treatment of the final product. Natural oiled or clear varnished finishes will mask the appearance of sapwood while smoking and white oiling may highlight the sapwood as it reacts to the finishing process.

Vintage

Quantity and size of knots will be significantly more evident in this grade. Maximum size of broken knots, 45mm. The boards will contain both heartwood and sapwood and have a higher degree of natural colour variation as a result. Allowable sapwood to be less 30% of the board width and less than 30% in volume. Growth ring and end crack defects will be more obvious and sunken filled to match the natural timber however may vary between boards and batches. Width of cracks 10mm maximum

Universal

Universal grading contains a mixture of prime, nature and rustic/character grading. Different species will have different characteristics e.g. european oak grading tends to include it's fair share of knotting so there will be a more limited amount of prime/ nature boards within universal grading. The boards will contain both heartwood and sapwood and have a degree of natural colour variation as a result. Knots are filled to match the natural timber however may vary between boards and batches.

Rustic / Character

Quantity and size of knots will be significantly more evident in this grade. The boards will contain both heartwood and sapwood and have a higher degree of natural colour variation as a result. Growth ring and end crack defects will be more obvious and filled to match the natural timber however may vary between boards and batches.

Rustic A / Nature (Herringbone & Chevron Panels)

This grading contains some knots, some sapwood and some colour variation. Maximum knot size is restricted to c25mm so it tends to have an overall balanced appearance due to fewer knots. Knots are filled to match the natural timber however may vary between boards and batches.

Knots & Fillers

Knots are created when a branch grows out from the crown of the tree and can also be an indication of a dormant bud. The tree naturally grows around knots hence the flowing effect of the grain around them. The amount and size of knots in our flooring is controlled within our grading guidelines. During the manufacturing process it may be necessary to fill knots to achieve a consistent surface finish – the colour and depth of the filler is determined by the overall design of the final product.

Medullary Rays

Medullary Rays are natural cellular structures within the tree and can appear as a sporadic formation of stretch like marks within the timber.

**Note: "Sunken" filler is a feature of our Forest Clifden, Tavern and Dalkey floors where the filler is set below the overall surface of the board for a rustic finish.*

Engineered Care & Maintenance

Caring for your Varnished Floor

Intensive Active Cleaner
500ml

Parquet Natural Cleaner
500ml

Aqua Shield
1000ml

REGULAR CLEANING & CARE

Dry cleaning:

It is usually sufficient to dry-clean prefinished surfaces with a mop, brush or vacuum. Heel streaks or grease stains can be easily removed with clean & green® active.

Damp cleaning:

For protection of the prefinished surface a treatment is necessary. Your floor should be cleaned regularly depending on the wear and tear of the surface with clean & green® natural diluted in water. Add ½ dosage cap of clean & green® natural to 5 litres (1.3 gal.) of water. Then wipe the surface with a well-wrung, slightly damp cloth. Don't clean the floor surface too damp, always avoid letting water stand on the surface. By polishing the floor with a cloth afterwards, you can optimize the shine of your floor's surface. Steam cleaning machines are not suitable for cleaning prefinished flooring.

INTENSIVE CARE

Damp cleaning:

As the floor will be subject to high traffic, the floor surface will need to be deep-cleaned periodically, depending on dirt build-up. Please use clean & green® active for deep cleaning. Add ½ dosage cap of clean & green® active to 5 litres (1.3 gal.) of water. Then wipe the surface with a well-wrung, slightly damp cloth. Do not clean the floor too damp, always avoid letting water stand on the surface. If required, repeat the process.

REFRESHING

To optically refresh the floor and improve durability, we recommend that you use Clean & Green AquaShield. Start by thoroughly cleaning the floor (dust-free). We recommend Clean & Green Active for this job. Clean & Green AquaShield is applied on diluted with a rectangular/square cotton cover mop. Evenly apply the AquaShield in overlapping lines. Wait about two hours before subjecting the floor to traffic and load. The application of Clean & Green AquaShield can lead to changes in the gloss level.

Caring for your UV Oiled / Waxed Floors

WOCA Soap
Avg. Coverage: 320-400m²/L

Woca Wood Cleaner/ Stripper
Avg. Coverage: 2 00-300m²/L

Maintenance Paste/Gel
Avg. Coverage: 20-30m²/L

REGULAR CLEANING & CARE

UV Oil Wax floors require ongoing regular cleaning with WOCA Soap to maintain and build up surface protection. This is especially important in first 3-6 months to build up and saturate the surface with soap. Higher traffic areas e.g hallways, kitchen areas will require frequent cleaning. White/Grey tone floors will also require more frequent care. It is recommended to always work with 2 buckets, 1 with soap water and 1 with rinsing water. Mix 125ml of soap with 5ltrs of luke warm water. Clean the floor with the minimum quantity of water. Steam cleaning machines are not suitable for use on all engineered/solid wood flooring.

INTENSIVE CARE

Use Woca Wood Cleaner the day before the WOCA Soap is first applied. N.B. Woca Wood Cleaner is a high strength intensive cleaner and is not for general/regular cleaning. Mix 125 ml. of Intensive Wood Cleaner with 2.5 L warm water. Use Intensive Wood Cleaner in the same way as for normal washing and leave to work for 5 minutes before wiping down with clean water. Intensive Wood Cleaner leaves soaped, oiled and wax-treated surfaces completely free of protection, so they should be re-oiled/waxed or soaped afterwards.

REFRESHING

Clean the surface with Intensive Wood Cleaner as per above. After cleaning, leave the surface to dry for at least 8 hourse at 20°C. Apply an appropriate amount of paste to a red/white Hand Scrubber and distribute over the surface in a thin, even coat. Continue polishing until the wood seems saturated and the surface has a uniform appearance. For larger areas (floor larger than 10m2) it would be advantageous to use a polishing machine. If the wood does not seem fully saturated after 4-6 hours, it would be advantageous to repolish, with less paste than the first treatment, but following the same procedure. Wait 4-6 hours before using the surface.
