composite for living

AlgoClear - 5 litre Whiteriver Composite Products

AlgoClear is a biocide that can be used for cleaning your Whiteriver composite decking and other Whiteriver composite products. Whiteriver have carried out testing of AlgoClear on their Portland and Ultrashield ranges of decking. Whiteriver in conjunction with AlgoClear have developed the below advice and guidelines for its use on Whiteriver composite products. AlgoClear is a concentrated cleaner that can be used for the removal of discolouration's and organic matter on hard surfaces. It's also Ideal for algae, lichen, mould and biofilm on paving, patios, render, tarmac, artificial grass and sports surfaces. Does not contain bleach or ammonia. Algoclear is a low maintenance option for keeping your decking area and does not require the use of a power washer. **Use biocides safely. Always read the label fully with product and safety information before application.**

Safety data sheet is available to download from our website www.wrg.ie

The decking installations that will require more regular cleaning are.

1. Areas that are not South facing and get less sunshine especially in Winter.
2. Where you are close to planting.
3. Decks that have insufficient fall to allow water drain off.

RRP for 5 litres is € 54.00.

Coverage rate for 5 litres diluted per the instructions below by sprayer is approx. 150 square metres.

How to use AlgoClear on your decking area.

1. Always read the label fully with product and safety information before application.
2. Remove all items off the deck, and brush the area clean removing all loose dirt before applying AlgoClear.
3. Apply on a dry day, during periods of strong sunshine you may need to increase the dilution rate by 15%. It is very important that the deck is dry and there is no risk of rain for at least 3 hour after application. This period gives the product time to work and dry in.
4. For best results apply by hand sprayer/knapsack sprayer. For smaller areas it is possible to use a watering can with a fine rose head.
5. Mix at ratio of 1-part AlgoClear to 10 parts water. When handling AlgoClear, always wear rubber gloves, safety glasses and mask or a visor.
6. Apply until the boards have a wet look. As you apply the product across the deck you will start to see it dry in. Keep the area clear of people, pets and wildlife until the product has dried away.
7. The AlgoClear will start to work gradually from the time it's applied and over the coming days you will start to notice a difference, the AlgoClear can be left on the composite boards and will dry away gradually after application.
8. After one week the area can be washed clean with soft brush and hose or watering can. We do not recommend the use of a power washer.
9. If a decking area has not been cleaned for a very long time or a heavy slime has developed on the deck, the build-up may not dissolve fully with spraying method mentioned above. This will require additional work with soft brushing of the AlgoClear mix over the affected areas and then rinsing with water until the area is clean.
10. This above process can be repeated every 12 months or more regular if mould growth is visible, in areas that are not South facing we would recommend repeating the process every 6 months.
